

MOHD SAIF

MERN Stack Developer | Full Stack & Backend Engineering | REST APIs | AI & RAG
Bareilly, Uttar Pradesh | [+91 9027370778](tel:+919027370778) | saifofficial0778@gmail.com | [GitHub](#) | [LinkedIn](#) | [LeetCode](#)

PROFESSIONAL SUMMARY

MERN/Full Stack Developer and MCA candidate (Expected 2027) with hands-on experience building scalable REST APIs, JWT/RBAC authentication systems, and MySQL-driven backend architectures across two production-style platforms — School ERP and SRMS Connect. Skilled in Node.js, Express.js, and relational database design, with additional experience integrating LLMs and Retrieval-Augmented Generation (RAG) for AI-powered applications. Strong foundation in Data Structures & Algorithms (100+ problems solved) and core CS fundamentals (OOP, DBMS, Operating Systems, Computer Networks), applied consistently from schema design through secure, validated implementation.

TECHNICAL SKILLS

- Languages: JavaScript (ES6+), Python | Frontend: React.js, HTML5, Tailwind CSS
- Backend: Node.js, Express.js, RESTful API Design | Databases: MySQL, MongoDB, SQL, Database Design
- Authentication & Security: JWT, Authentication, Authorization, RBAC, bcryptjs, Zod
- AI / Generative AI: LLMs, Generative AI, Prompt Engineering, Retrieval-Augmented Generation (RAG), LLM API Integration
- Architecture: Controller-Service-Repository, Backend Architecture, API Design, Multi-Tenant Architecture, Transaction Management
- Tools: Git, GitHub, Postman, Cloudinary, MySQL Workbench
- Core CS: Data Structures & Algorithms (DSA – 100+ solved), OOP, DBMS, Computer Networks, Operating Systems

EXPERIENCE

Full Stack Developer Intern — SRMS Connect | MERN Stack, MySQL, JWT |

July 2026

Alumni & Student Networking Platform

- Engineered SRMS Connect's core authentication system from scratch using JWT, bcrypt password hashing, and Zod schema validation to secure signup, login, logout, and password-reset flows across the platform.
- Implemented Role-Based Access Control (RBAC) across Student, Alumni, and Admin roles alongside failed-login logout logic, converting a single open login into a permissioned, brute-force-resistant system.
- Designed a 3-tier MySQL data architecture (Identity/Auth/Application) to cleanly separate college-verified records from live application data, improving data integrity and long-term maintainability.
- Structured 30+ backend REST endpoints using a Controller-Service-Repository architecture with Cloudinary integration for media handling, keeping the codebase modular and easier to extend without touching core business logic.

PROJECTS

School ERP System (SaaS) | MERN Stack, MySQL

- Designed a multi-tenant MERN architecture for School ERP (SaaS), enabling a single codebase to serve multiple schools instead of requiring a separate deployment per institution.
- Built and shipped 60+ RESTful APIs covering Academic Year, School, Class, Student, and Teacher modules, each secured with JWT authentication to support role-scoped access.
- Applied RBAC across admin, teacher, and student roles so each user could only view and act on data scoped to their permissions, enforcing separation of duties at the API level.
- Engineered a transaction-safe fee-payment system using ACID-compliant MySQL transactions to auto-generate fee accounts, installments, and receipts in place of manual accounting entries.

AI Resume Parser & Screening Tool | Python, Groq LLM API, Pydantic

- Built an AI-powered resume parsing and screening tool that extracts structured data from unstructured resumes (PDF/DOCX) and job descriptions using a Groq-hosted LLM with Pydantic schemas for structured output.
- Applied prompt engineering to guide the LLM toward consistent, schema-validated extraction, then automated candidate-to-job scoring against parsed requirements to replace manual screening with a ranked fit percentage and skills-gap breakdown.
- Ranked and auto-shortlisted candidates by score, reducing multi-resume review to a single sorted list, and am now preparing the tool for web deployment.

Personal Notes RAG (Semantic Search over Study Notes) | Python, Qdrant, Sentence-Transformers, Groq LLM API

- Built a RAG system that turns AI-chat PDF exports of Hinglish study notes into a searchable knowledge base, so answers come straight from my notes instead of scrolling long, filler-heavy chats.
- Engineered a Python pipeline (pypdf, regex) for rule-based cleaning (LLM cleaning altered the text), heading-aware chunking and metadata; embedded chunks with BAAI/bge-m3 into Qdrant and grounded a Groq LLM on top-3 matches; 5 of 6 test queries hit top-1.

EDUCATION

Master of Computer Applications (MCA) — SRMS College, Bareilly | Expected 2027

Bachelor of Science (B.Sc.) - MJPRU University | 2024

ACHIEVEMENTS & CERTIFICATIONS

- Solved 100+ Data Structures & Algorithms (DSA) problems and earned the 50+ Day LeetCode Badge (2026) for consistent daily problem-solving.
- Oracle Certified Foundations Associate — Agentic AI (Oracle University, Aug 2026).
